A WILEY DIGITAL ARCHIVES COLLECTION

Geography has never been more important in helping us to understand our rapidly changing world.

The Royal Geographical Society (with the Institute of British Geographers) is the United Kingdom's learned society for geography and professional body for geographers, a registered charity and a membership organization.

The society advances geography and supports geographers in the UK and across the world, with more than 16,500 members and a body of work that reaches millions of people each year.

Accessible through the Wiley Digital Archives platform, the Royal Geographical Society (with IBG) collection contains a vast range of original sources that have shaped over five centuries of geographical science, discovery, research and thought, and represents a unique opportunity for scholars to reinvigorate their research with previously unexplored historical context.

From anthropology and area studies to meteorology and physical geography, the Wiley Digital Archives: Royal Geographical Society (with IBG) collection contains an extensive body of diverse and interdisciplinary original materials, available to researchers via institutional access.

Access and research thousands of rare materials including:

- Charts and Plans
- Expedition Reports and Scrapbooks
- Fieldnotes, Correspondance and Diaries
- Grey Literature
- Illustrations
- Journal Manuscripts
- Maps and Atlases
- Monographs
- Photographs and Artwork
- Proceedings and Lectures
- & Various Ephemera**

Spanning a wide variety of interdisciplinary research areas and serving educational needs in:

- Anthropology
- Area Studies (African, Asian and Pacific, Middle Eastern, Latin American and Caribbean, North American)
- Cartography and Visualizations
- Climate Change
- Colonial, Post-Colonial and Decolonial Studies

Understanding our World

The *Wiley Digital Archives* platform has been specifically designed to meet modern archival research needs.

- Intuitive interface, available in 35 languages including Chinese and Arabic
- Full-text searchability for printed documents and metadata
- Visual search results and image galleries
- Enhanced metadata (catalog information is supplemented with additional metadata derived from text)
- Downloadable optical character recognition (OCR) text, translatable into multiple languages
- Term clouds, term frequency, popularity and clustering tools
- Exportable, fielded datasets for charts, tables, statistics from printed or handwritten sources
- Geo-tagged maps and place of publication data, for visual searching and browsing
- Textual analysis tools for concordance, collocation and frequency distribution of terms
- Headers—names, places, and dates—and core metadata have been manually keyed in
- Collections are browsable at archive, collection, box, and folder levels
- Print, download, translate, save and share documents - text and data are available to reference outside of the platform
